

CANDIDATE-CREATED OPERATING ARTIFACT

Entrepreneur Outcome Resolver

A contract for trustworthy next-best-move personalization. Illustrative - not a description of GoDaddy's internal architecture.

PURPOSE

Translate a customer's changing business context into one useful next move while making agent authority, evidence, and freshness explicit. The Resolver is designed to improve product, engineering, analytics, Guide, governance, and executive conversations about applied AI.

THE RESOLUTION RECORD

STATE	Current intent, business maturity, product state, observed behavior, constraints, uncertainty, and data freshness.	input
NEXT	One action likely to advance a named entrepreneur outcome now.	decision
AUTH	Draft, recommend, execute within explicit bounds, or escalate to customer/Guide/owner.	control
PROOF	Customer movement, relevance, trust, quality, economics, latency, operating load, and regional compliance.	evidence
TTL	Time or event that invalidates the resolution and requires updated context.	learning

RESOLUTION RULES

1. No NEXT without a named customer outcome.
2. No action without an explicit AUTH boundary and owner.
3. No continuation without comparable PROOF.
4. No confidence without a freshness horizon.
5. No global reuse without local policy and context review.
6. No production scale without observability, rollback, and recovery.

ILLUSTRATIVE DEFAULT

STATE: Site is live; discoverability is weak. **NEXT:** Diagnose intent gaps and prepare a focused acquisition experiment. **AUTH:** Recommend and prepare; entrepreneur approves publishing and spend. **PROOF:** Qualified visits, engaged sessions, conversion event, cost guardrail. **TTL:** 7 days.

RESOLUTION REVIEW CANVAS

Field	Discovery questions	Required evidence
Outcome	What useful customer movement are we trying to create? Why now?	Current behavior, friction, and business relevance
STATE	What context is required? Is it permitted, reliable, complete, and fresh?	Data lineage, quality, consent/policy, confidence, timestamp
NEXT	Why is this action better than doing nothing or the current experience?	Decision logic, alternative, expected consequence
AUTH	Who may act? What is reversible? Which exceptions require a human?	Permission, budget, channel, content, policy, escalation owner
PROOF	What would confirm relevance, trust, quality, economics, and operating fitness?	Baseline units, online/offline measures, guardrails, stop criteria
TTL	When does the context or recommendation become stale?	Time/event trigger, re-resolution path, recovery behavior

DISPOSITION

RESOLVE Context is sufficient, authority is clear, and evidence/rollback are ready.	BOUND Proceed with narrower authority, audience, channel, budget, or duration.	ESCALATE Human judgment is required because authority, sensitivity, confidence, or consequence is unclear.
REFRESH State is stale or changed; do not reuse the prior answer.	HOLD Evidence or production ownership is incomplete.	STOP Customer value, trust, quality, economics, or compliance does not justify continuation.

PORTFOLIO USE

Each roadmap initiative should produce a set of comparable resolution records. That creates a portfolio view of customer moments, shared capabilities, unresolved authority, evidence strength, local variants, and reusable components - without relying on an unsupported maturity score.

LEADERSHIP CADENCE

- **Weekly:** experiment and production resolution review.
- **Monthly:** shared capability, economics, incident, and regional-variant review.
- **Quarterly:** roadmap investment, scale, hold, stop, and team-capability decisions.
