Hiring Team
GoDaddy
Re: Director, Applied ML/AI

GoDaddy's challenge is not whether generative AI can create a logo, a page, a campaign, or a recommendation. It is whether those capabilities can become a coherent, globally scalable personalization system that helps an entrepreneur make the next useful move while preserving customer control, operating reliability, and measurable business value.

That is the mandate I would pursue. My candidate thesis is simple: **resolve the next best move, then prove it created momentum**. The operating mechanism behind that thesis makes five things explicit for every personalized action: the customer's current state, the next useful move, the agent's authority, the evidence required to continue, and the point at which the answer must be refreshed.

My fit is grounded in the leadership layer this mandate must orchestrate. I have led engineering and high-reliability technical organizations, run customer-backward operations at Amazon scale, connected telemetry, quality, customer, support, and engineering signals across approximately 1,000 fielded robots at Vape-Jet, and directly designed agentic workflows that combine context, retrieval, human judgment, escalation, evaluation, governance, and adoption.

That experience prepared me to connect specialized technical capability to product decisions, customer control, operating ownership, and economics. I would earn technical trust through architecture review, evaluation design, direct use of GoDaddy's development toolchain, and deliberate team design - partnering with deeper specialists wherever the work demands it rather than manufacturing expertise.

The independent candidate vision at <https://russelldudek.github.io/godaddy/> makes this reasoning tangible through an interactive Entrepreneur Outcome Resolver, a balanced outcome scorecard, a strategic fit and technical credibility plan, and a first-120-days plan. It is not a claim about GoDaddy's undisclosed systems; it is a concrete hypothesis for how I would begin discovery and earn the roadmap.

I would welcome a rigorous conversation about where GoDaddy most needs personalization to change an entrepreneur outcome, where agent authority is currently ambiguous, and what evidence would earn greater investment in the three-year roadmap.

Carpe diem,
Russell Dudek
